

Dear SLVWD Voter,

I've recently remarried, retired, and returning as candidate for Director for SLVWD. My qualifications for this position are lengthy, so I'd like to invite you to listen to my podcast. It is titled, "SLV Water Talk", on Spotify. It is very informative and entertaining.

No one on our planet is more qualified than me, with the exception of one person I know. I've spent 35 years building and designing water infrastructure. I'm a licensed Civil Engineer and have served 10 years as a Director. I've attended two seminars for Special District elected officials and employees. If you are concerned about how your money is spent, I'm the only candidate qualified to make decisions to spend it wisely. Say goodbye to future rate hikes. I'm also experienced in, "Asset Management", which is a powerful tool for Water Agencies to maintain their infrastructure and finances.

I'm an, "Old School", environmentalist. I overcame 4 to 1 opposition banning Glyphosate. I supported our fish biologist, and I designed innovative plans to end septic pollution into the San Lorenzo river. I'm the only Civil Engineer in the County who has designed effective plans for increased water production and storage.

Sincerely,

Bill Smallman.
